# 1 Introduction

Multicopter flight control systems generate high-level control commands in terms of total thrust and body moments. The **mixer (control allocation block)** converts these commands into individual motor speed-squared commands.

This document derives the control allocation matrix for the **PX4 Iris quadrotor**, which uses an **X-configuration** geometry.

## 2 Vehicle Configuration

### 2.1 PX4 Iris Geometry

The quadrotor is arranged in an X-configuration, with motors located at  $45^\circ$  to the body axes.

### 2.2 Motor Layout

Motor	Position	Arm Angle	Spin Direction
1	Front-Right	$+45^\circ$	CCW
2	Front-Left	$-45^\circ$	CW
3	Rear-Left	$-135^\circ$	CCW
4	Rear-Right	$+135^\circ$	CW

All motors are at distance  $l$  from the center of mass.

### 3 Coordinate Frames and Sign Conventions

#### 3.1 Body Frame Definition

- $X_B$ : Forward
- $Y_B$ : Right
- $Z_B$ : Downward

#### 3.2 Moment Sign Convention (Right-Hand Rule)

- Roll moment  $M_x$ : rotation about  $X_B$
- Pitch moment  $M_y$ : rotation about  $Y_B$
- Yaw moment  $M_z$ : rotation about  $Z_B$

#### 3.3 Thrust Direction

Thrust acts **upward**, opposite to the  $+Z_B$  axis.

### 4 Motor Position Vectors

Because the motors lie in the  $x$ - $y$  plane and are equally spaced at  $45^\circ$ , the position vectors are:

$$\mathbf{r}_i = \begin{bmatrix} \frac{l}{\sqrt{2}} & \frac{l}{\sqrt{2}} & 0 \\ \frac{l}{\sqrt{2}} & -\frac{l}{\sqrt{2}} & 0 \\ -\frac{l}{\sqrt{2}} & -\frac{l}{\sqrt{2}} & 0 \\ -\frac{l}{\sqrt{2}} & \frac{l}{\sqrt{2}} & 0 \end{bmatrix}$$

Each row corresponds to motors 1 through 4 respectively.

### 5 Thrust Force Model

The thrust force generated by motor  $i$  is

$$\mathbf{F}_i = \begin{bmatrix} 0 \\ 0 \\ -T_i \end{bmatrix}$$

where  $T_i = k_t \omega_i^2$ .

## 6 Moment from Thrust

Moments arise from the cross product:

$$\boldsymbol{\tau}_i = \mathbf{r}_i \times \mathbf{F}_i$$

Let

$$\mathbf{r}_i = \begin{bmatrix} x_i \\ y_i \\ 0 \end{bmatrix} \quad \mathbf{F}_i = \begin{bmatrix} 0 \\ 0 \\ -T_i \end{bmatrix}$$

### 6.1 Cross Product Expansion

$$\boldsymbol{\tau}_i = \begin{vmatrix} \hat{i} & \hat{j} & \hat{k} \\ x_i & y_i & 0 \\ 0 & 0 & -T_i \end{vmatrix}$$

#### 6.1.1 Roll Moment ( $M_x$ )

$$\tau_{x,i} = y_i T_i$$

#### 6.1.2 Pitch Moment ( $M_y$ )

$$\tau_{y,i} = -x_i T_i$$

#### 6.1.3 Yaw Moment

$$\tau_{z,i} = 0$$

### 6.2 Final Moment Vector

$$\boldsymbol{\tau}_i = \begin{bmatrix} y_i T_i \\ -x_i T_i \\ 0 \end{bmatrix}$$

## 7 Total Moments

### 7.1 Roll Moment

$$M_x = \sum y_i T_i$$

$$M_x = \frac{l}{\sqrt{2}}(T_1 - T_2 - T_3 + T_4)$$

## 7.2 Pitch Moment

$$M_y = - \sum x_i T_i$$

For positive nose-up pitch:

$$M_y = \frac{l}{\sqrt{2}}(T_1 + T_2 - T_3 - T_4)$$

## 7.3 Yaw Moment

Yaw is generated by reaction torque:

$$Q_i = k_m \omega_i^2$$

Motor	Spin	Yaw Contribution
1	CCW	$+Q_1$
2	CW	$-Q_2$
3	CCW	$+Q_3$
4	CW	$-Q_4$

$$M_z = Q_1 - Q_2 + Q_3 - Q_4$$

## 7.4 Why Thrust Does Not Produce Yaw

- Thrust vectors are parallel
- No moment arm about  $Z_B$
- Yaw arises purely from motor reaction torque

## 8 Total Thrust

$$T = T_1 + T_2 + T_3 + T_4$$

## 9 Control Allocation Matrix

### 9.1 Force–Moment Mapping

$$\begin{bmatrix} T \\ M_x \\ M_y \\ M_z \end{bmatrix} = \begin{bmatrix} k_t & k_t & k_t & k_t \\ \frac{k_t l}{\sqrt{2}} & -\frac{k_t l}{\sqrt{2}} & -\frac{k_t l}{\sqrt{2}} & \frac{k_t l}{\sqrt{2}} \\ \frac{k_t l}{\sqrt{2}} & \frac{k_t l}{\sqrt{2}} & -\frac{k_t l}{\sqrt{2}} & -\frac{k_t l}{\sqrt{2}} \\ k_m & -k_m & k_m & -k_m \end{bmatrix} \begin{bmatrix} \omega_1^2 \\ \omega_2^2 \\ \omega_3^2 \\ \omega_4^2 \end{bmatrix}$$

## 9.2 Mixer Equation

$$\begin{bmatrix} \omega_1^2 \\ \omega_2^2 \\ \omega_3^2 \\ \omega_4^2 \end{bmatrix} = \mathbf{A}^{-1} \begin{bmatrix} T \\ M_x \\ M_y \\ M_z \end{bmatrix}$$

where  $\mathbf{A}$  is the control allocation matrix above.

## 10 Conclusion

This document derives the mixer matrix for an X-configuration quadrotor from first principles using rigid-body mechanics. The formulation is directly applicable to PX4, Simulink-based controllers, and real-time embedded implementations.
